

# METAL REPLACEMENT

The presence of metal and metalized components within polymer-based packaging poses recycling challenges. Substituting metal components with in-molded polymer-based metallic colors enhances the packages' recyclability without compromising its premium metal appearance. These specialized products are tailored for injection and extrusion blow molding applications, offering a variety of metal aesthetics suitable for polyolefins. Our collection includes a bespoke color pallet of various metallic colors, with the option of customization to match your specific application.
